

**FOR IMMEDIATE RELEASE**

Orleans, MA--

Coastal Engineering Co., Inc. has added Energy Management to their line of professional services. The Energy Management department provides comprehensive energy assessments of residences and building structures. The Energy Management group identifies actual energy needs; measures current energy consumption, and makes recommendations to upgrade or replace energy-consuming systems to increase energy efficiency.

Coastal Engineering uses green building technologies to create designs that embrace energy conservation and include renewable energy technologies. Coastal Engineering takes pride in creating engineering strategies and solutions that are ecologically sensible and economically feasible. The Energy Management group provides solutions that benefit clients' objectives to reduce energy consumption and improve a structure's operation while also benefitting the surrounding community by reducing carbon emissions.

Our engineering staff has specialized education, training and project experience that allows us to focus on the varied needs of our clients. We are committed to a vision of sustainable growth for our clients and community.

Coastal Engineering is one of the leading engineering firms in this region specializing in civil, structural, and marine engineering, and land surveying services as well as innovative and alternative wastewater treatment technology and renewable energy sources.
